AK Dissanayake sees favourability ratings improve, but other party leaders see declines in January 2024

All party leaders continue to have negative favourability ratings

In IHP SLOTS polling in January 2024, all major party leaders continued to have negative favourability ratings. The net favourability rating of NPP/JVP leader AK Dissanayake increased 12 points to -10 whilst favourability of SJB leader Sajith Premadasa and Pres. Ranil Wickremesinghe decreased by 9 points to -53 and -77 respectively.

Favourability estimates for each month are based on 100–500 interviews conducted during that month and during a few weeks before and afterward to ensure a minimum set of responses. The January 2024 estimates are based on 376 (Sajith Premadasa), 346 (A.K. Dissanayake), 361 (Ranil Wickremasinghe), and 121 (Gotabaya Rajapaksa) interviews.

Note to editors

We have noted that some members of the public misunderstand media reporting of these numbers. Negative scores, *i.e.*, a net favourability rating of less than zero, means that the individual or institution is UNPOPULAR. Only positive scores, *i.e.*, net favourability is more than zero, mean that the individual or institution is POPULAR on average.

About IHP

IHP is an independent, non-partisan research centre based in Colombo, Sri Lanka. The SLOTS lead investigator is Dr Ravi Rannan-Eliya of IHP, who has trained in public opinion polling at Harvard University and has conducted numerous surveys over three decades.

Methodology

SLOTS surveys a national sample of adults (ages 18 and over) reached by random digit dialling of mobile numbers, and others coming from a national panel of respondents who were previously recruited through random selection. SLOTS tracks favourability by asking respondents if they have a favourable or unfavourable opinion of a public figure or institution: net favourability being the average of the positive (+100) and negative (-100) responses. All estimates are weighted to match the national population with respect to age, sex, ethnicity, socioeconomic status, sector, province and past voting preference. Monthly estimates are based on samples of 100+ interviews pooled from interviews in each month and from weeks before and afterwards. As the January update uses a more recent data set than the previous update, there are small changes in estimates of favourability ratings for previous months.

Funding

The SLOTS survey has previously been funded by the Neelan Tiruchelvam Trust, the UK National Institute for Health and Care Research (NIHR), The Asia Foundation in Sri Lanka, and others. Current field work is financed by the IHP Public Interest Research Fund and others. The sponsors play no role in the study design, analysis, or interpretation of findings. Furthermore, the survey findings do not necessarily reflect the views or positions of past and present funders. Interested parties can contact IHP for more detailed data and results.
